**IMPACT**

20+ AI Engineers from around the world curated customer dataset and created a POC prototype to predict implicit in treating patients in ER scenarios.

## The Challenge:

Mitigating Implicit Biases in Healthcare Using AI

### CERTIFICATE OF ACHIEVEMENT

THIS IS PRESENTED TO

**Chandana Puthane**

**Junior ML Engineer**

The team embarked on a challenge to develop an AI model to identify and reduce gender bias, especially towards women, in emergency response scenarios. The model was showcased as a POC through a web-based tool. It aims to address biases in patient vignettes across different ethnicities, utilizing datasets from sources like Kaggle and Google, and enhancing patient-specific information analysis in clinical and social media contexts.
